+ about us

a+i engineering was founded in 2002 by 5 aerospace engineers with a strong background in aerospace and Lighter-Than-Air engineering. Since the formation of the company, a+i successfully provided services to major companies in the aerospace, automotive and transportation industry.

“Our experience in advanced analysis methods and our knowledge of the development processes and tools integration found the benefit for our customer. It is our mission to further improve our methods and processes to ensure a sustained success of our customer.”

+ engineering services

a+i engineering offers services in analytical design, tool- and model-based development as well as in the development of modern software tools and models supporting design and design processes. These core competencies are combined with a structured systems engineering approach, good knowledge of advanced S/W design techniques and of state of the art engineering-tools as well as solid project management methods.

The illustration below shows an overview of the different services. It also indicates the network existing between the different disciplines as well as the links established between the customer and a+i.
